-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-29 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-29 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. ____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wada (U.S. Pat. 5,966,557) in view of Sasai et al (U.S. Pat. 6,047,144).

Wada discloses an image forming apparatus comprising a printing medium tray 28, 29 loading a printing medium P; a tray open/closed detecting unit 106; a transferring roller 19 transferring a toner image onto the printing medium; a concentration controlling unit (i.e. image stabilizing control means, Col. 3, lines 7-20) controlling a concentration of the toner image transferred to the printing medium according to the measured resistance value, wherein the concentration controlling unit controls the concentration of

Art Unit: 2852

the toner image according to the resistance value measured by the resistance measuring unit in response to the printing medium tray having changed (Col. 5, lines 50-65 & Col. 7, lines 15-23).

Wada further discloses the concentration controlling unit controls the concentration of the toner image when the detected power changes from an off-state to an on-state (i.e. copying machine enters a down state, Col. 5, line 53); a photosensitive body 9; a toner image forming unit 11; the concentration controlling unit controls the concentration of the toner image formed by the toner image forming unit (Col. 3, lines 7-10).

Wada disclose the humidity is measured by a sensor 101, 102 but not by measuring a resistance value of the printing medium passing the transfer roller. However, the method for measuring humidity in image forming apparatus by measuring changes in resistance value of printing medium passing through the transfer roller is old and well known in the art as taught by Sasai et al. Sasai et al disclose method and apparatus for measuring humidity by measuring resistance value of the printing medium passing through the transfer roller 25 and the fixing roller 21. It would have been obvious to one having ordinary skill in the art to provide the humidity measuring device as taught by Sasai et al to the device of Wada so that a more optimum voltage can be applied to the transferring roller without sudden voltage changes.

Sasai et al further disclose the transferring roller comprising a metal shaft (Col. 1, line 39) and the high voltage power supplier 31 is coupled to the metal shaft of the

Art Unit: 2852

transferring roller (Fig. 1); a sensing resistor is coupled to the high voltage power supplier to detect a transfer current supplied to the transferring roller (Fig. 1).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hoang Ngo whose telephone number is (571) 272-2138. The examiner can normally be reached on 6:00am - 2:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Arthur Grimley can be reached on (571) 272-2136. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
